

MITUL JODHANI

Backend Developer

mituljodhani078@gmail.com | +91 7405716627 | Surat, Gujarat, India

PROFESSIONAL SUMMARY

Backend Developer specializing in cloud-native infrastructure, scalable microservices architecture, and robust system design. Skilled in building event-driven systems, real-time communication frameworks, and secure REST/WebSocket APIs. Experienced in designing containerized applications, secure data workflows, and multi-tenant billing pipelines with a focus on performance and reliability.

TECHNICAL SKILLS

Languages & Runtime: JavaScript, Node.js

Frameworks: Express.js

Databases & Caching: MongoDB, Redis

Messaging & Queues: BullMQ

Cloud & DevOps: Docker, AWS S3

APIs & Architecture: REST APIs, Microservices, JWT Authentication

Tools & Libraries: Multer, Sharp, Nodemailer

TECHNICAL PROJECTS

NodeX — Decentralized Group Sharing Platform

Node.js, Express, Fastify, MongoDB, RabbitMQ, Docker

- Engineered an **independently deployable microservices suite** with isolated Auth, User, Group, Media, and Billing services to achieve clean architectural decoupling.
- Architected high-throughput, **asynchronous inter-service communication** workflows using a **RabbitMQ** message broker layer.
- Designed a centralized utility governance structure and implemented robust **JWT-based stateless authorization**.
- Integrated a production-grade **Stripe billing** architecture with automated, secure webhook verification.
- Implemented object storage infrastructure using **AWS S3** for secure, optimized media asset uploads.

Seller Dashboard — Multi-Seller E-Commerce Backend

Node.js, Express, Nodemailer, BullMQ, Multer, Sharp

- Built a **modular-monolith backend** for a multi-seller e-commerce dashboard, structured for future extraction into independent microservices.
- Architected a **domain-driven module system** (auth, product, analytics) with strict separation across controller, service, repository, and model layers.
- Implemented secure authentication using **bcrypt** password hashing, email OTP verification via **Nodemailer**, and **JWT sessions** with short-lived access tokens and rotating, hashed refresh tokens stored in MongoDB.
- Designed a product catalog module with **ownership-scoped CRUD operations**, cursor-based pagination for large-dataset retrieval, and a status-driven publishing lifecycle (processing to draft to published).
- Built an **asynchronous image-processing pipeline** using Multer for multipart uploads and **BullMQ** (Redis-backed) for background job queuing, decoupling slow image-resize operations from the request/response cycle.
- Centralized error handling through a custom **AppError hierarchy** and Express error middleware, standardizing API responses and preventing internal error leakage in production.

EDUCATION

Bachelor of Engineering, Information Technology

SSASIT, Surat | Expected Graduation: 2027 | CGPA: 7.91 (through 6th semester)

CERTIFICATIONS

Job Ready Cohort — Sherians Coding School (Online)

Issued September 22, 2025 | Certificate ID: 1771b20d
